Languages

Giorgos Nonis

Software Engineer working on cloud-native SaaS platforms, combining frontend development (Angular, TypeScript) with growing involvement in platform and deployment engineering.

I contribute across the product lifecycle — implementing features, debugging production issues, collaborating with customers, and participating in architectural decisions. Alongside application development, I work with Kubernetes-based environments, GitOps workflows, API gateway customization, and observability tooling.

I value ownership, transparency, and creating a safe environment where teams can grow, experiment, and continuously improve.

Work experience

Software Engineer

February 2024

Stibo DX, Aarhus

- Develop and maintain Angular & TypeScript frontend features on a CMS platform
- Collaborate directly with customers to understand requirements, debug production issues, and deliver AI-driven integration solutions.
- Contribute to architectural discussions and implementation decisions across frontend and platform layers.
- Work within Kubernetes & OpenShift environments, managing containerized workloads (Docker/Podman – CRI).
- Support GitOps workflows using ArgoCD for environment promotions and deployment automation.
- Maintain and customize Kong API Gateway configurations, including Lua handlers and CUE schemas.
- Contribute to observability practices using Prometheus, Grafana and Loki (alerting rules, monitoring improvements).

Volunteer Mentor

December 2025

HackYourFuture, Aarhus

Providing one-on-one student support and assisting with class mentoring

Frontend Developer - Internship

July 2023
October 2023

RaskRask, Aarhus

Primarily working with Typescript - React.js -Next.js - Ionic.

Participating in all phases of the development process, including planning, prototyping, design, implementation, testing, and maintenance.

Contributing to architectural decisions regarding the state management of the booking system and its implementation.
